High performance and high productivity hot spray flooring systems

POLYUREA H SL - FAST CURING SELF LEVELING SPRAY SYSTEM

POLYUREA H SL is a two component modified polyurea resin that is applied by hot spraying. Even being a fast-curing product, it is slightly slower and therefore more leveling than other polyureas and hot spray-applied polyurethanes. This results in a continuous, elastic flooring system with either a smooth or a textured anti-skid topcoat. The latter can be achieved by broadcasting quartz sand to saturation onto the fresh product, and sealing the surface with a fast-curing

polyaspartic coating like Kryptanate 100 or 100 LV.

POLYUREA H SL has been designed for the application of self-leveling floor coatings, with a shorter curing time that still provides excellent, smooth looking finish.

POLYUREA H SL - ADVANTAGES

- Fast execution allows to apply up to 800 m2 per day.
- Shorter cycle times minimise time and space occupation at job sites.
- Waterproof and non-porous Possibility of making a non-slip floor by simple sand broad- cast.
- Good adhesion to multiple substrates.
- Resistant to abrasion, impact and wear (see TDS).
- Wide range of colors available
- Contains raw materials from renewable sources.

Case study of the week Terrace refurbished with the IMPERMAX SF system, totally solvent-free system

Treatment with a continuous waterproofing system applied with a roller in liquid form. Solvent-free at all stages of the process:

Primer, membrane (IMPERMAX SF) and aliphatic protective finish.

IMPERMAX SF is a 100% solids, non-flammable, solvent-free (odorless) polyurethane resin that once cured forms a highly resistant elastomeric membrane.

Impermax SF resin has no limitations neither in transportation (not ADR) nor in storage. It is easy and comfortable to apply, allowing you to achieve a final result of excellent quality.
